Typical application circuit

Sheet 1

Part No.	C1/C3 (ceramic capacitor)	C2/C4 (ceramic capacitor)

**Note:**

- C1 and C2 (C3 and C4) are required and should be connected close to the pin terminal of the module.
- The capacitance of C1 and C2 (C3 and C4) refer to Sheet 1.
- To reduce the output ripple further, C2 and C4 can be increased properly if required, tantalum capacitor and aluminum electrolytic capacitor of low ESR may also suffice.
- When the products used as the circuit like figure 3, an inductor named as LDM up to 10μH is recommended in the circuit to reduce the mutual interference.
- Cannot be used in parallel to enlarge the power for output and hot swap.
