FCC Information

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy, and if not installed and used in accordance with the instruction manual, may cause interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- ◆ Reorient or relocate the receiving antenna;
- ◆ Increase the separation between the equipment and receiver;
- ◆ Connect the equipment into an outlet on a circuit different from that which the receiver is connected;
- ◆ Consult the dealer or an experienced radio/television technician for help.

RoHS

This product is RoHS compliant.

RS-232 Control Tool Operation

Overview

The VS481A's built-in bi-directional RS-232 serial interface allows system control through a high-end controller, PC, and/or home automation / home theater software package. RS-232 serial operations in a VS481A installation can be managed via a Graphical User Interface (GUI) on systems that are running Windows. In order to use this Control Tool, two separate items of software must be installed on all of the PCs in your installation – .NET Framework 2.0 and the Control Tool AP. This procedure is detailed in the following sections.

Before You Begin

.NET Framework 2.0

To install .NET Framework on your PC, do the following:

1. Download the executable file from the ATEN website or the Microsoft Download Center online, and run it.
2. Follow the instructions on the screen. The installation applet will automatically detect the operating system and install the correct drivers

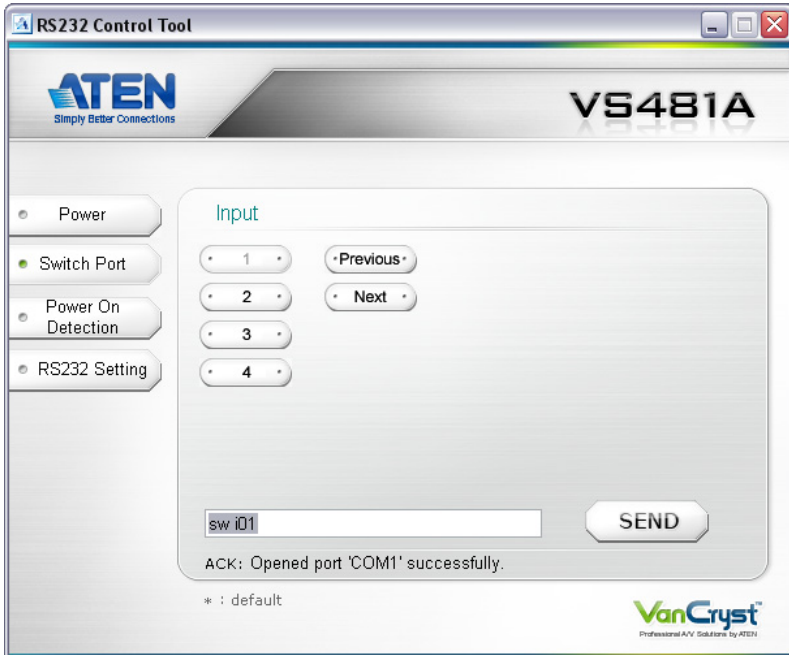

RS-232 Control Tool AP

To download the RS-232 Control AP in order to use the Browser GUI to manage the serial commands in your VS481A installation, do the following:

1. Download the RS-232 Control Tool AP from the ATEN website (www.aten.com).
2. Save the file to a convenient location.
3. Run the file to open the RS-232 Control Tool GUI.

GUI Main Page

The RS232 Control Tool is a convenient and intuitive method to manage the RS-232 commands in your VS481A installation from one screen. To invoke the GUI, simply click on the icon in your file system. The interface appears, and opens on the Switch Port page by default, as below:

The various elements of the GUI are described in the following sections.

Switch Port

Input

1 Previous

2 Next

4

sw i01 SEND

ACK: Opened port 'COM1' successfully.

On the *Switch Port* page, the following actions are possible:

- ◆ Click on a port number (**1–4**) to change the input to that port. Click **Send** to send the command
- ◆ Click **Previous** to change the input port to the previous port. Click **Send** to send the command.
- ◆ Click **Next** to change the input to the next port in the sequence. Click **Send** to send the command.

Switch Port Commands

These actions can also be performed by keying the command into the text box, and clicking **Send**.

The available formulas for Switch Port commands are as follows:

1. Switch Command + Input Port number + Output Port number [Enter]

For example, to switch input port 02 to output port 01, input the following:

```
sw i02 o01 [Enter]
```

2. Switch Command + Port Sequence [Enter]

For example, to switch to the next port, input the following:

```
sw + [Enter]
```

The following tables show the possible values and formats for the **Input** port, **Port Number** and the **Port Sequence**:

Command	Description
sw	Switch command

I/O Port	Description
i	Input Port

Port number	Description
xx	01-04 port (default is 01)

Port Sequence	Description
+	Next Port
-	Previous Port

-
- Note:** 1. Each command string can be separated with a space.
2. The **Input** port command string can be skipped, and the default value(s) will be used. For example, to switch the input port 01 to the default output port, simply enter: **sw i01**.

sw on

SEND

ACK: Opened port 'COM1' successfully.

The *Power* page provides two options – Power On and Power Off, as shown above.

- ♦ To power on the device, click **ON** (or enter the command *sw on* in the text box) and click **Send**.
- ♦ To power off the device, click **OFF** (or enter the command *sw off* in the text box) and click **Send**.

Power On Detection

Function

• ON •

• OFF •

pod on

SEND

ACK: Opened port 'COM1' successfully.

The *Power On Detection* provides two options – Power On and Power Off, as shown above.

- ◆ To enable Power on Detection, click **ON** (or enter the command *pod on* in the text box) and click **Send**.
- ◆ To disable Power on Detection, click **OFF** (or enter the command *pod off* in the text box) and click **Send**.

Power On Detection Commands

The formula for Power On Detection commands is as follows:

Power On Detection + Control command [Enter]

For example, to turn off the Power On Detection feature, input the following:

pod off [Enter]

The following tables show the possible values for the **Control** string:

Command	Description
pod	Power On Detection command

Control	Description
on	Turn on
off	Turn off

Note: The default setting for Power On Detection is ON.

RS-232 Setting

COM Setting

COM COM1(*) ▼

Baud Rate 19200(*) ▼

Data Bit 8 bit

Parity None

Stop Bit 1 bit

Flow Control None

CONNECT

ACK: Opened port 'COM1' successfully.

The controller's serial port should be configured as follows:

Baud Rate	19200
Data Bits	8
Parity	None
Stop Bits	1
Flow Control	None

To select the serial port, do the following:

- ◆ Select a port from the drop-down menu and click **CONNECT**.

If the port has been selected, the Acknowledgment message will read:

Opened port COM1 successfully

Verification

After entering a command, a verification message appears at the end of the command line as follows:

- ◆ **Command OK** - indicates that the command is correct and successfully performed by the switch
- ◆ **Command incorrect** - indicates that the command has the wrong format and/or values.
