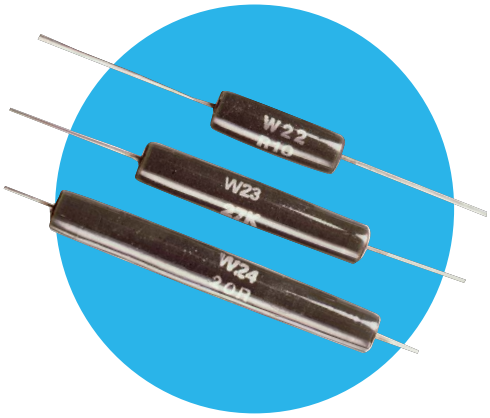
Resistors

Vitreous Enamelled Wirewound Resistors



W20 Series

- CECC approved
- Suitable for harsh environments
- Impervious lead free vitreous enamel coating
- Overload characteristics ideal for protection circuits
- High stability and reliability
- High power dissipation for size

All Pb-free parts comply with EU Directive 2011/65/EU (RoHS2)

Construction

A high purity ceramic substrate is assembled with interference fit end caps to which are welded the termination wires. The resistive element is wound on the substrate and welded to the caps; the vitreous enamel protective coating is then applied.

Terminations

Material Copper clad steel wire, nickel plated and solder-coated.
Strength The terminations meet the requirements of IEC 68.2.21.
Solderability The terminations meet the requirements of IEC 115-1,– Clause 4.17.3.2.
Length W23's and W24's are not supplied on tape. Minimum lead length is 30 mm.

Marking

The resistors are legend marked with type reference, resistance value and tolerance. Values are marked in accordance with IEC 62.

General Note

TT Electronics reserves the right to make changes in product specification without notice or liability.
All information is subject to TT Electronics' own data and is considered accurate at time of going to print.

Solvent Resistance

The body protection and marking are resistant to all normal industrial cleaning solvents suitable for printed circuits

Flammability

All materials used in the construction of W20 series resistors are inorganic and inherently non-burning.

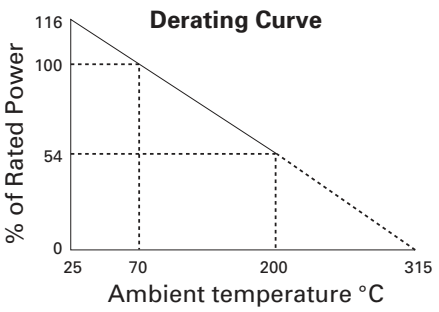
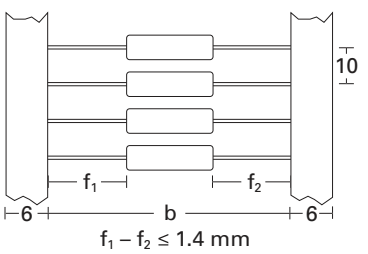
Application Notes

The termination should not be bent closer than 1.6mm from the body, and the recommended minimum bend radius is 1.2mm. The terminations are solderable to within 4mm from the body. When cold, vitreous enamel has excellent insulation resistance. In common with all insulants the specific resistance of the enamel decreases with increase in temperature. Therefore, resistors operated at near maximum temperature cannot be classed as insulated and should not be used in contact with any conducting material. Care must be taken when determining clearance distance between the resistor body and the printed circuit board or other components to ensure these are not over heated. Resistance is measured 6mm from body.



Packaging

For W21 and W215 the standard method of packaging is taped in Ammo Packs. For W22 the standard method of packaging is taped and reeled. W23's and W24's are available only as loose packed in boxes.



Type	b
W21	63±2
W215	73±2
W22	73±2

Ordering Procedure

Example: W22-3K3JI (W22, 3.3 kilohms ±5%, Pb-free)

W	2	2	-	3	K	3	J	I
1				2			3	4

1 Type	2 Value	3 Tolerance	4 Packing & Termination Finish	
W21	E24 = 3/4 characters	F = ±1%	I = Standard packing & Pb-free	
W215	R = ohms	G = ±2%	PB = Standard packing & SnPb	
W22	K = kilohms	J = ±5%	W21, W215	1000/box
W23			W22	700/reel
W24			W23, W24	50/box
