

- 1.The current in the wire passing through the hole should be AC signal
  - 2.VCC.GND pin connect to DC 5V-30V
  - 3.You can connect OUT.GND pin to an [oscilloscope](#),
- The amplitude of the output signal varies with the change of the current in the wire ,  
Adjustment potentiometer can also change the amplitude of the output signal,the output wave is similar with below.
